

TALLURU CHANDRAKANTH

Artificial Intelligence & Data Science Engineer

+91 8328645249 | talluruchandrakanth131105@gmail.com | Tirupati, India | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Final-year B.Tech (AI & Data Science) student with hands-on experience building and deploying scalable ML applications and full-stack solutions. Proven ability to deliver production-ready tools, including an NLP-based skill-extraction engine with 85%+ keyword matching accuracy. Proficient across the stack—from REST API development and real-time database management to integrating Generative AI (Gemini API). Seeking an AI/ML Engineer role to drive measurable impact in a fast-paced production environment.

TECHNICAL SKILLS

Languages: Java, Python, SQL

AI / ML: Agentic AI, Generative AI, Machine Learning Techniques

Libraries & Frameworks: React.js, Pandas, Numpy, Matplotlib

Tools: Git, GitHub, VS Code, MySQL Workbench

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication Skills, Adaptability, Time Management

PROFESSIONAL EXPERIENCE

Artificial Intelligence Intern

Jul 2025 – Sep 2025

EduTantr, Bengaluru, India

- Spearheaded the architecture and deployment of Grow Hub, a full-stack AI career platform built with Python, TensorFlow, Keras, and Streamlit, reducing manual resume screening time by 97%.
- Implemented NLP techniques (TF-IDF, cosine similarity) to build a skill extraction engine, consistently attaining 85%+ keyword matching accuracy against 100+ job descriptions.
- Engineered end-to-end ML pipelines with Scikit-learn, Pandas, and NumPy; authored comprehensive technical documentation covering model architecture and REST API endpoints to facilitate knowledge transfer for a 5-person team.

PROJECTS

[Career DNA](#) — Developer Analytics Platform

Python | Streamlit | Gemini 2.5 Flash API | PyPDF2 | Pandas

- Programmed a developer analytics web app integrating the GitHub REST API to score 5+ consistency metrics (commit frequency, repository count, streak duration), surfacing actionable insights for career benchmarking.
- Automated resume parsing using PyPDF2 and Pandas to extract structured candidate data; integrated the Gemini 2.5 Flash API to generate role-specific technical interview questions, cutting manual preparation time by 95%.

Real Time Event Management System

Node JS | My SQL | Rest API | HTML | CSS

- Developed a dynamic event management web application using [Node.js](#), implementing role-based access control and session management to securely route administrators and standard users.
- Engineered backend concurrency logic utilizing SQL constraints to validate total available event slots against current available registration counts in real-time.

Student Course Portal

Angular | TypeScript | NgRx | RxJS | Reactive Forms | Vitest | Angular TestBed

- Designed a scalable Angular Single Page Application (SPA) leveraging TypeScript and NgRx for robust state management; integrated REST APIs and RxJS for efficient asynchronous data streams and student enrollment workflows.
- Deployed HTTP Interceptors with automated retry logic and attained 100% unit test coverage utilizing Vitest, Jasmine, and Angular TestBed to ensure production-level code reliability.

EDUCATION

B.Tech — Computer Science & Engineering (AI & Data Science)

Aug 2023 – Present

CGPA: 8.49/10.0

Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, Chennai, India

CERTIFICATIONS

- Python Essentials 1 & 2 — Cisco Networking Academy
- Technology Job Simulation — Deloitte
- Data Analytics Job Simulation — Deloitte
- Social Innovation in Industry 4.0 — NPTEL
